

What is SARE?

Since 1988, the Sustainable Agriculture Research & Education (SARE) program has been the go-to USDA grants and outreach program for farmers, ranchers, researchers and educators who want to develop innovations that improve farm profitability, protect water and land, and revitalize communities. To date, SARE has awarded over \$310 million to more than 7,433 initiatives.

SARE is grassroots with far-reaching impact

Four regional councils of expert practitioners set priorities and make grants in every state and island protectorate.

SARE communicates results

SARE shares project results by requiring grantees to conduct outreach and grower engagement; and by maintaining an online library of practical publications, grantee-produced information products and other educational materials.

SARE: Advancing the Frontier of Sustainable Agriculture in...

Connecticut

Project Highlight: *Arming Basil Growers with Disease-Control Solutions*

Whenever a new pest enters the scene, farmers must quickly learn how to deal with it if they are to remain profitable. Two SARE-funded projects are helping Connecticut farmers cope with this very situation in the case of a serious outbreak of Downy mildew of basil, a new disease to the eastern United States.

Typically, organic farmers depend on cultural practices to reduce disease problems, with control products complementing these practices. In the case of Downy mildew, Connecticut farmers could find no solutions due to the lack of published research on the efficacy of available control products. So Extension agent Joan Allen looked at disease-control products on two species of basil in one SARE-funded project, and then in a second project focused on the most promising contenders. Because of her work, basil growers now have access to possible solutions.

The results from Allen's first project provided basil farmers information about two products, narrowed down from an original five. Farmers started using the better performers, MilStop and Oxidate. Allen also looked at the effect of nitrogen fertilization rate alone and in combination with the fungicides on the severity of the disease. Close to 500 farmers and gardeners learned of possible new practices through presentations.

For more information on these projects, see sare.org/projects, and search for project numbers [ONE11-132](#) and [ONE12-152](#).

SARE in Connecticut

SARE's Impact

53 percent

of producers report using a new production technique after reading a SARE publication.

79 percent

of producers said they improved soil quality through their SARE project.

64 percent

of producers said their SARE project helped them achieve higher sales.

Learn about local impacts at:
northeast.sare.org/sare-in-your-state/connecticut

Contact Your SARE State Coordinator

SARE sustainable ag coordinators run state-level educational programs for Extension and other ag professionals, and many help grant applicants and recipients with planning and outreach. Visit northeast.sare.org/state-pages/connecticut to learn more.

www.SARE.org

SARE is funded by the USDA's National Institute of Food and Agriculture (NIFA).

This report includes summaries of competitive grant programs only. Some competitive grant programs that are no longer offered may be included or excluded from the totals in this report depending on the grant program and SARE region.

AGRICULTURE PROJECTS FUNDED IN CONNECTICUT

by USDA's
Sustainable Agriculture Research and Education (SARE) Program

Connecticut has been awarded \$2,248,455 grants to support 73 projects, including but not limited to, 15 research and/or education projects, 3 professional development projects and 31 producer-led projects. Connecticut has also received additional SARE support through multi-state projects.

RESEARCH AND EDUCATION GRANTS

Project #	Project Title	SARE Support	Project Leaders
LNE18-363	Improved N Management for Corn using Aerial Images, Adapt-N, Chemical and Biological Tests, and Cover Crops	\$241,570	Dr.Karl Guillard University of Connecticut
LNE13-324	Developing adaptable native shrubs for the green industry	\$58,347	Dr.Jessica Lubell University of Connecticut
LNE09-279	Development and on-farm training of biologically based methods for integrated crop management of stone fruits in New England	\$195,498	Dr.Robert Marra Connecticut Agricultural Lorraine Los University of Connecticut
LNE09-281	Aronia berries: A sustainable nutraceutical crop for the Northeast	\$151,821	Dr.Mark Brand University of Connecticut
LNE03-177	Perimeter trap crop approach to pest management on vegetable farms	\$139,527	Ruth Hazzarad University of Massachusetts Jude Boucher UNiversity of Connecticut Cooperative Extension
